An assignment can be successful in two ways: by its spirit, engagement and creativity or by its handcraft and correctness. For the handcraft of an article it takes years to learn. ITU students are very fortunate, that they are offered or forced to learn it early in their study career: it makes group work a lot easier when students know the format and template they have to fulfill.

I think if the students/authors rewrite the article it will become a good one – take one paragraph at the time and try to grasp the idea and purpose with the paragraph. If the students need a reference to an old school book in Danish of how to do an experiment and to write an article, then this book is short and simple: Zacharie “Det vellykkede eksperiment” Read only page 151 to page 167.

I look forward to reading the article again. Keep up the spirit and learn it.
