InC Research Seminars

Proposal for autumn 2007 – 1st or 2nd Thursdays every month, 10-12 am

Three different seminar types are proposed.
- **PhD seminars** in which one or more PhD students outline their research agenda, current challenges or problems. It could also be in the format of presenting a contribution to a journal or a conference. The idea is to see the seminar as inspiration for other researchers as well as supplementary supervision and constructive criticism for the PhD students.
- **Resarch project seminars** in which one or more project members present the current status or an interesting aspect of a specific research project. It could also be in the format of presenting a contribution to a journal or a conference.
- **Guest seminars** in which external guests are invited to give a presentation. These could either be from industry or from other research environments. Hot shots or just interesting people.

For all seminars hold that they are open seminars and that external guests are welcome – also to give input to the seminar if the organizers want this. Introductions and material are uploaded to the InC-blog one week in advance.

Preliminary time schedule and content

6 Sept	Cancelled
11 Oct	Research projects: New InC staff members present their research interests. Tomas Sokoler: Pervasive computing / Elderly and design Gitte Stald: Current research Lone Malmborg and Lisbeth Klastrup will summarize DAC07 and give a short introduction to their own papers presented at the conference.
